

NYDALOXE PRECISION - YOUR NAME FOR PRECISION!

EWS.Varia Clean - Cleaning and corrosion protection unit

Optimize the life of your Varia VX mounts and inserts with EWS.Varia Clean! With outstanding features that increase your productivity and protect your equipment, your Varia VX mounts and inserts stay clean and safe.

Features

- Safe and reliable removal of impurities and contamination from the Varia cutting unit, such as chips
- Corrosion protection through the oil applied during cleaning
- Spindle protection against dirt and damage by the EWS Varia Protect protective cap during storage outside the machine
- Simple and quick application

First, using your anti-corrosion cleaning oil (not included in the kit), give the tool mount cleaner a few good sprays.

Next, spray the anti-corrosion cleaning oil into the insert cleaner pot (give it a few good sprays).

Put the insert into the cleaner pot and turn it a few times to clean the insert and coat it with oil.

Once clean, attach the insert protective tag and place to one side (or in your tool tray).

Now insert the mount cleaner into your tool.

Give it a few good turns to clean the inside of the tool mount and then replace it in the pot.

Put the tool cap on to keep it clean whilst it is not being used. Replace all the pot lids. You have now cleaned and protected your Varia tool and insert!
